DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claims 1, 3-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Haning et al. (WO 98/40384), the equivalent of this patent is USPN 6,174,884 B1. All references herein are made to the English language patent.

Haning et al. teaches a method of treating cerebrovascular diseases (e.g., stroke) comprising administering to a patient a PDE-II inhibitory compound of formula I, including the compound represented by example 39 (which reads on formula (I) compound of claim 9 in the instant application), see col. 43, lines 25-45, see also col. 13 line 50 to col. 14 line 61.

Haning et al. does not particularly teach the particular manifestations/symptoms of a stroke (e.g., impaired memory, perception, learning ability) or those of Parkinson's, Alzheimer's or dementia.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to employ the method of Haning in treating disorders of perception, learning, concentration or memory.

One of ordinary skill in the art would have been motivated to employ the method of Haning in treating disorders of perception, learning, concentration or memory because disorders of perception, learning, concentration or memory are known to result from a stroke. Treating the underlying cause of these disorders, would therefore be reasonably expected to treat these symptomatic/secondary disorders. One of ordinary skill in the art would have also been motivated to employ Hanin's method in disorders of perception, learning, concentration or memory, regardless of their etiology.
